Item Code : MN

Size XS S M L XL 2XL

Compressive sleeves, used in the first stage after a surgical intervention (between 4-6 weeks, depending on the doctor's recommendation) for surgical procedures on the arms (lifting, reducing, lifting or brachioplasty).

Compression sleeves help to improve blood circulation and reduce the swelling that occurs after the intervention.

Having a high degree of compression, it helps prevent the appearance of harmful fluids in the body.

The compression sleeves offer more comfort for the surgical areas and contribute to a better adaptation to the new contour of the hands.

Item Code : CH01

Size XS S M L XL 2XL

compressive Panty with Under Bust Positioning, used in post-operative stage I in plastic and aesthetic surgery (4-6 weeks, depending on your doctor's recommendations) as support after operations such as: Abdominoplasty, Abdominal Liposuction (Upper and Lower part of Abdomen, Back, Hips, Buttocks, Flank), Lipoplasty, Liposculpture.

Can be worn postnatally.

The CH01 compression panty offers additional support and compression during the first post-operative stage. This item has large coverage on the abdominal area, waist and hips, flanks to provide the necessary compression in the surgical areas and to reduce the tension created by the intervention on those areas.

The compression panty improves circulation, reduces swelling after the procedure and prevents the appearance of harmful fluids in the body.

Item Code : VPF01

Size XS S M L XL 2XL

Women's Compression Suit used in Stage I post-operative in plastic and aesthetic surgery (4-6 weeks, depending on your doctor's recommendations) as support after operations such as: Lifting the Lower Area of Body, Thigh Lifting, Liposuction (Upper and Lower Abdomen, Back, Flank), Lipoplasty, Liposculpture, plastic surgery procedures after gastric bypass surgery, bariatric surgery, abdominoplasty.

The compression suit VPF 01 offers support and additional compression during the first post-operative stage. This item has large coverage on the back, abdominal area, waist and hips, to provide the necessary compression in the surgical areas and to reduce the tension created by the intervention on those areas.

The compression suit helps improve circulation, reduces swelling after the procedure and prevents the appearance of harmful fluids in the body.

The product is made of high quality material, taking into account the ideas of specialist doctors in the field of Plastic and Aesthetic Surgery.

This product is created with the aim of providing support in the intervention areas and reducing the tension on the newly formed scars, thus avoiding their extension.

The TG03 Compression Pants help improve blood circulation and reduce the swelling that occurs after the intervention. Having a high degree of compression, it prevents the appearance of harmful fluids in the body.

Item Code : BF 02

Size XS S M L XL 2XL

Compressive Face Band with dual close, code BF02 used in the first stage after surgery (depending on your doctors recommendation) following double chin, face lift, neck lift, brow lift, liposuction (face, chin & neck). After surgery, your doctor may instruct you to wear this wrap constantly (even while sleeping) and only remove it when you need to shower.

Simple to wear, the facial garment improves blood circulation, compresses the bleeding vessels, stops the loss of blood, minimizes swelling after the procedure, accelerates the healing process, and allows the patient to return to daily routines sooner.

Used following a facial procedure, this compression garment also provides support to surgical areas for more comfort and helps the skin fit better to its new contours.

Item Code : BO

Size XS S M L XL 2XL

Ear Band - code BO used in the first stage after ear surgery (depending on your doctors recommendation) following otoplasty or pinnaplasty (ear pinning cosmetic surgery). After surgery, your doctor may instruct you to wear this wrap constantly (even while sleeping) and only remove it when you need to shower.

Features:

- Elastic fabric so there is no need for fastening
- Black or Beige color available

Item Code : BF

Simple to wear, the facial garment improves blood circulation, compresses the bleeding vessels, stops the loss of blood, minimizes swelling after the procedure, accelerates the healing process, and allows the patient to return to daily routines sooner.

Used following a facial procedure, this compression garment also provides support to surgical areas for more comfort and helps the skin fit better to its new contours.

Item Code : HBG01

Size XS S M L XL 2XL

Compression Pants with High Back Above the Knees code HBG01 used in Stage I after a surgical intervention (between 4-6 weeks, depending on your doctor's recommendations), for compression and support after interventions such as: abdominoplasty, liposuction of the abdomen, thighs, hips and buttocks .

This product is created with the aim of providing support in the intervention areas and reducing the tension on the newly formed scars, thus avoiding their extension.

The HBG01 Compression Pants help improve blood circulation and reduce the swelling that occurs after the intervention. Having a high degree of compression, it prevents the appearance of harmful fluids in the body.

The product is made of high quality material, taking into account the ideas of specialist doctors in the field of Plastic and Aesthetic Surgery.

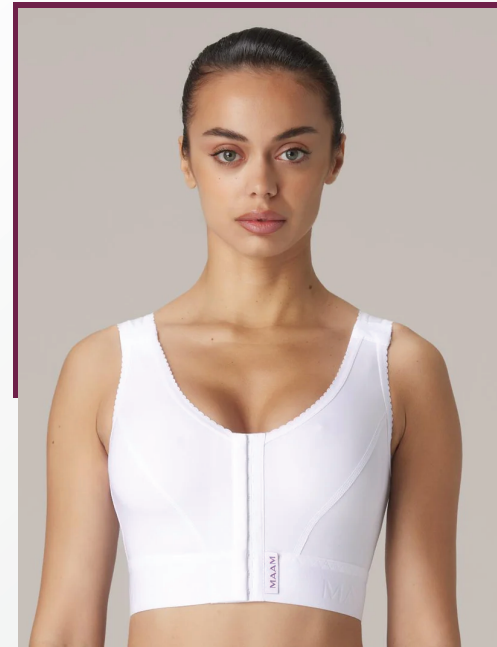

Item Code : VT

Size XS S M L XL 2XL

The Compression Vest with Vertical Seams - code VT is used in post-operative stage I in plastic and aesthetic surgery (4-6 weeks, depending on your doctor's recommendations) as a support after operations such as: breast augmentation (breast augmentation) with or without implant breast, mastopexy (breast lift), breast reduction or reconstruction following breast cancer.

This can also be used as a sports vest, for physical activities (jogging, fitness, aerobics, pilates), because it offers suitable and long-lasting support.

The Compressive Medical Vest with vertical seams VT helps improve circulation, reduces swelling after the procedure and keeps the implant in the correct position. It also provides support for sensitive areas and reduces the tension on newly formed scars, to prevent them from spreading.

Item Code : MLF

Size XS S M L XL 2XL

The Long Sleeve Compressive Vest code MLF is used in post-operative stage I in plastic and aesthetic surgery (4-6 weeks, depending on your doctor's recommendations) as a support after operations such as: breast augmentation (breast enlargement), mastopexy (lift of the nipples), breast reduction or reconstruction following breast cancer.

The Long Sleeve Compression Vest - MLF helps improve circulation, reduces swelling after the procedure and keeps the implant in the correct position. It also provides support for sensitive areas and reduces the tension on newly formed scars, to prevent them from spreading.

Item Code : VCO

Size XS S M L XL 2XL

Compression Vest with Attached Elastic Band , code VCO , is used in stage I postoperative in plastic and aesthetic surgery (4-6 weeks, depending on your doctor's recommendations) as support after operations such as: breast augmentation (breast enlargement) with or without breast implant, mastopexy (breast lift), breast reduction or reconstruction after cancer breast
Compressive Medical Vest with Attached Elastic Band - VCO helps to improve circulation, reduces swelling after the procedure and keeps the implant in the correct position. It also provides support for sensitive areas and reduces the tension on newly formed scars, to prevent them from spreading.

The vest has an attached Stabilizing Elastic Band that sits on top of the breasts. This has the role of stabilizing the breast implant and preventing its lifting.

Item Code : VNG

Size XS S M L XL 2XL

Gynecomastia Compressive Vest code VNG is used in post-operative stage I in plastic and aesthetic surgery (4-6 weeks, depending on your doctor's recommendations) after operations such as: Liposuction (abdominal, pectoral, lateral), Liposuction, Gynecomastia or Pectoral Implants.

The VNG Compression Vest improves blood circulation, reduces swelling caused by the intervention and helps eliminate harmful fluids from the body.

The vest offers support in the surgical areas (back, chest, abdomen and on the sides of the abdomen) for more comfort and for a better adaptation to the new body contour.

The product is made of high quality material, taking into account the ideas of specialist doctors in the field of Plastic and Aesthetic Surgery.

OUR PHILOSOPHY

Trust and Care

Development and Innovation

Satisfaction

Our mission is to create, innovate and manufacture the highest quality and aesthetically pleasing compression garments that provide women and men with optimal recovery during the post-operative healing process.

We are **passionate** about what we do and invest all **our creativity, curiosity** and **innovation** power in finding new ways to surprise and delight our customers with quality compression garments that are not only useful but also beautiful.

We put **the needs of our customers** first and produce items to help them in the healing process, offering them ideal post-operative compression, maximum comfort and a sense of sophistication. Customers love our products, which is what inspires us the most.

What motivates us is to provide **outstanding products** and a **memorable experience**. We are proactive in **understanding** our customers' needs, **we ask, we**

listen and **we offer solutions**, we meet and exceed expectations and we always remain the same reliable professional partner.

Innovation is at the heart of our business as we aim to provide exceptional quality compression garments. We grow and innovate through **continuous research and development**, partnering with local and international medical professionals to create superior products that meet the needs of comfort, aesthetics and the best quality assistance in the recovery process.

Our work is governed by **the principle of sustainability**, which translates into more efficient use of resources (energy, fabrics and materials, waste), optimizing production processes and supporting the communities in which we operate. It is very important for us to take care of the world our children will grow up in and try to leave it as clean as possible.
